ABOUT US

We have a justified pride in our position as the first company to introduce the thermal modification technology “Thermowood”. We improve and direct each stage of the production process with innovative approaches that enrich life. We strive to reinforce wood products, which we regard as living materials, without compromising their aesthetics or natural value. With World-class facilities equipped with latest technology machineries and an annual production capacity of 30,000 m³, Chattel Wood products are shipped to 80 countries worldwide including England, Switzerland, Canada, Germany, Spain, Japan, Russia, USA, Azerbaijan, Finland, People's Republic of China, India and Saudi Arabia.

Operating principles that are fully compliant with European standards and practices, a strong technological infrastructure including Thermowood production, the only solid wood R&D laboratory and a corporate culture focusing on innovation are the qualities that make Chattel Wood the uncontested leader of its sector

THERMO DECKING

Thermowood Decking, also known as heat-treated wood decking, is a revolutionary choice for homeowners seeking both aesthetics and sustainability. This remarkable material is crafted from natural wood that undergoes a carefully controlled thermal modification process. This process enhances the wood's properties, making it an ideal choice for decking purposes.
